The improvements I made from Lab1:

Adding an extra "nomatch" to every field, giving the user more hints when failing to say something the program understands.

I split the files in 3 different parts both for Lab1 and 4, one for the menu and one separate file for each menu option. To Lab4 I added more synonym options such as "regular" as well as "standard". I also added more rule options like "leaving" and "travelling". I also added a rule for confirmation instead of having yes/no as options in the field.
